ROLL-TEC™ Steel Bottom Rolling Doors

The opening is oversized but your budget isn't? Wilson bottom rolling steel doors fit both.

Wilson bottom rolling steel doors are an economical solution for applications needing large, or even super-wide, doors. Choose from unidirectional, bi-parting, tail or floating group styles. Power operation is standard.

The turn-key solution.

Pre-construction engineering and design, along with supervised installation, make for turn-key service on all Wilson bottom rolling steel doors.

Robust steel construction seals against all weather, including hurricane force winds.

With custom design for every door, Wilson bottom roll steel doors can be specified to meet the most demanding codes for wind load. And each panel is fully weather-stripped with brush seals.

Flexibility to meet your space and aesthetic requirements.

Though they can handle extremely large openings, the interior wall space needed to accommodate Wilson bottom rolling steel doors need not exceed the width of one or two individual panels, depending on whether you choose a unidirectional or bi-parting style door. And they can be painted any color to complement the exterior finish of your building.

Plus, they can be specified with optional personal passage doorways and Thermo Pane safety glass windows (4ft x 5ft per unit) as you desire.

Choose pushbutton or radio remote control.

A simple two-button (open and close) control box, which
